Fungi Kingdom contains molds, mildews, rusts, smuts, yeasts, and mushrooms. All fungi are multicellular except for yeast, which is unicellular. Most fungi are saprobes (live on dead and decaying organic matter) or parasitic (live in or on a host organism from which it takes nutrients) All fungi are heterotrophic; they do not have chloroplasts

## **Fungi Notes - Georgia Virtual School**

Though considered an individual kingdom today, traditionally fungi were classified as plants with no stems, leaves, or chlorophyll. About 100,000 species of fungi are known. Most fungi are made of protoplasm-containing tubes called hyphae, sometimes divided by walls called septa. Hyphae grow by branching and elongating.
