Linear algebra moves steadily to n vectors in m -dimensional space. We still want combinations of the columns (in the column space). We still get m equations to produce b (one for each row). Those equations may or may not have a solution. They always have a least-squares solution. The interplay of columns and rows is the heart of linear algebra.

If A is an $m \times n$ matrix, if the equation $Ax = b$ has at least two different solutions, and if the equation $Ax = c$ is consistent, then the equation $Ax = c$ has many solutions. p. If A and B are row equivalent $m \times n$ matrices and if the columns of A span \mathbb{R}^m , then so do the columns of B . q.
