MATH 115 Final Exam Solution: By graphing or other means, one can identify the intersections points to occur at $x = 1$ and $x = 4$. In addition, notice that $g(x)$ is the graph above $f(x)$. The area between the graphs is given by the following definite integral: $\int_1^4 (g(x) - f(x)) dx = \int_1^4 ((x+28) - (x^4 - 8x^3 +$

1. $\sum_{n=1}^{\infty} \frac{1}{n^3} \leq \sum_{n=1}^{\infty} \frac{1}{n^5} + 3$ Answer: Notice that $\frac{1}{n^3} \leq \frac{1}{n^5} + 3 < \frac{1}{n^3} + \frac{1}{n^5} = \frac{1}{n^2}$ for all n . Therefore, since $\sum_{n=1}^{\infty} \frac{1}{n^2}$ converges (it's a p-series with $p = 2 > 1$), the series $\sum_{n=1}^{\infty} \frac{1}{n^3}$ also converges by the comparison test. 2. $\sum_{n=1}^{\infty} \frac{3^n}{4n+4} \dots$
